Kinematic Models

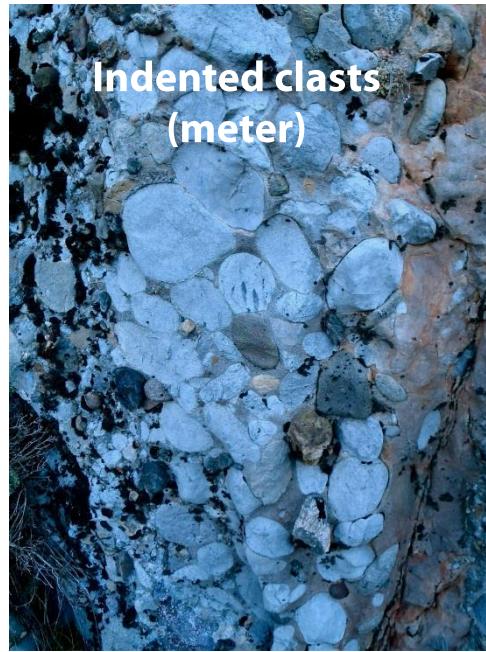

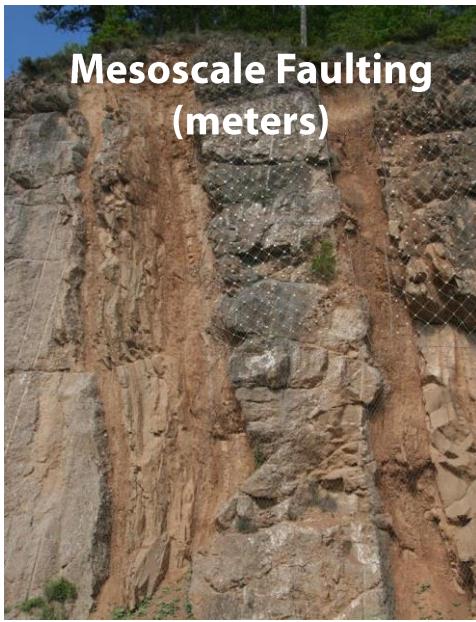

Migrating Hinge (i.e. Suppe *et al.*, 1997)

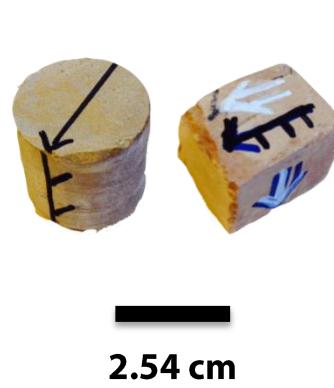

Fixed Hinge (i.e. Ford *et al.*, 1997)

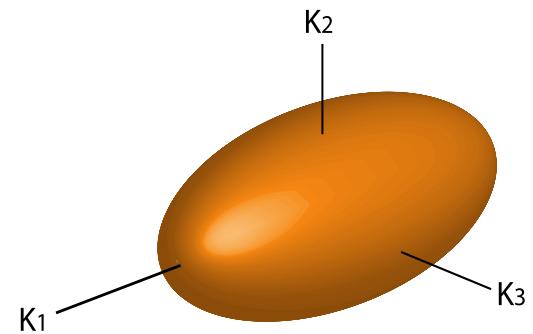

Strain

Anisotropy of Magnetic Susceptibility (AMS)

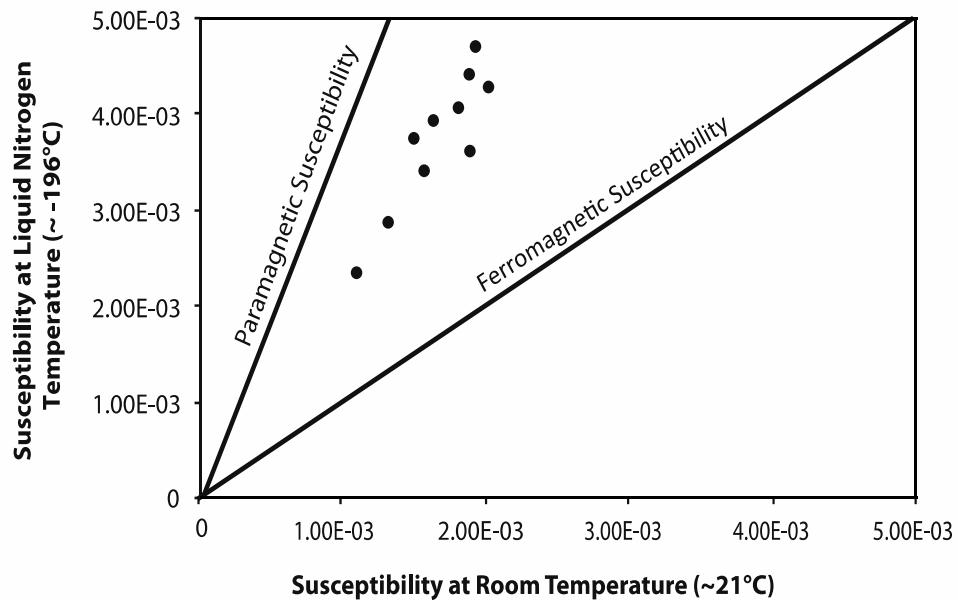

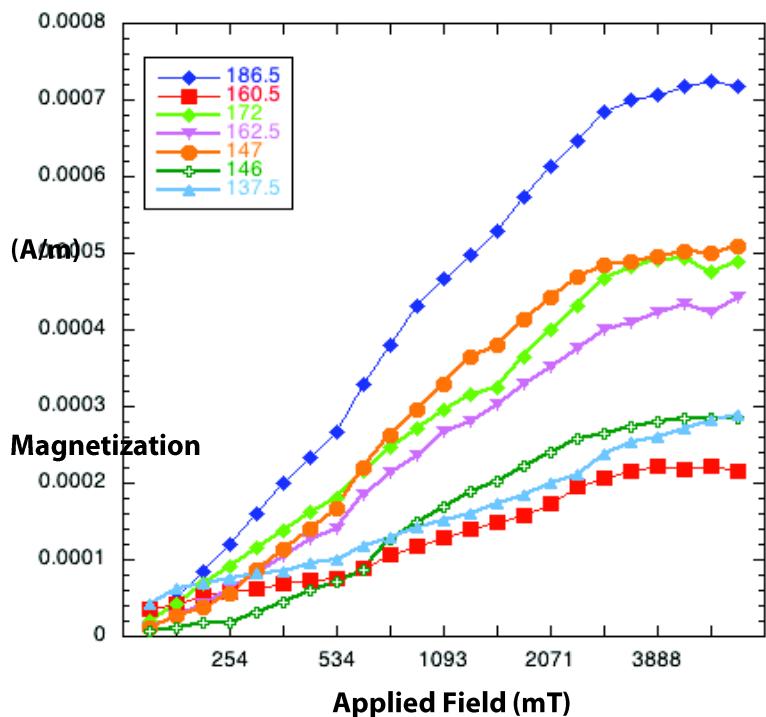

2.54 cm

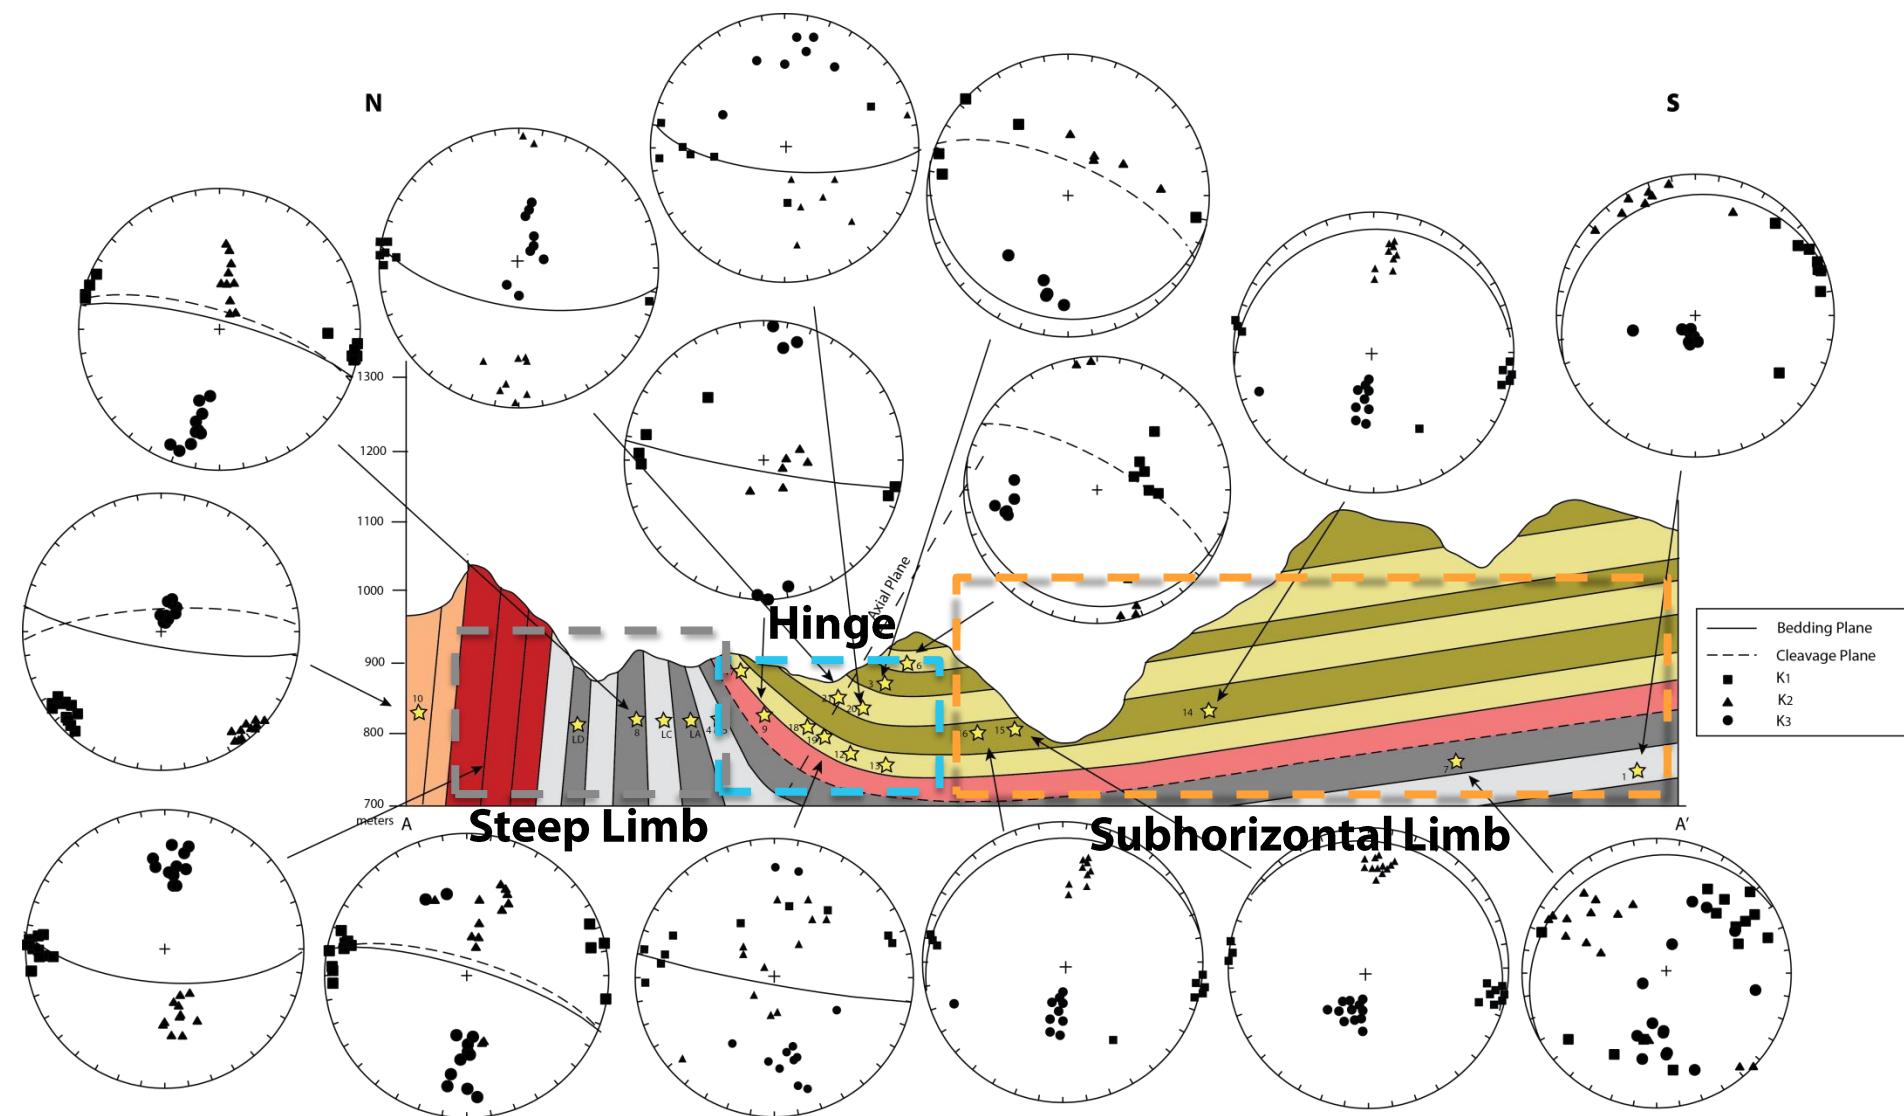

Principal Axes: K₁ > K₂ > K₃

Rock Magnetics

- Isothermal Remanent Magnetization (IRM)
- Low-Temerature Susceptibility
 - Paramagnetic and Ferromagnetic minerals

AMS Results – Orientation Data

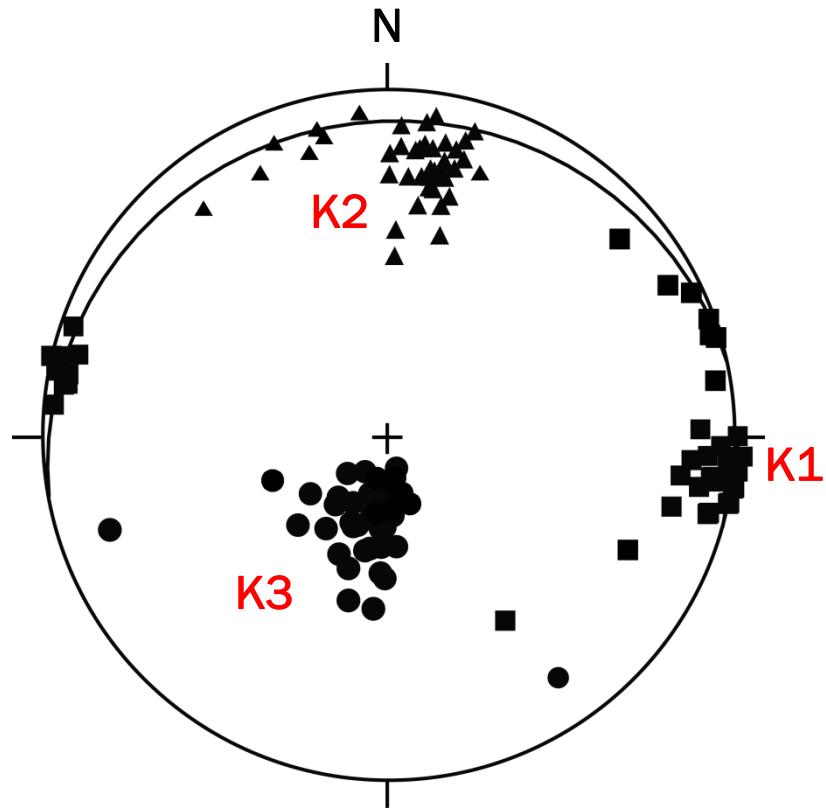

Subhorizontal Limb

6 sites, 43 specimens

- K3 parallel to pole to bedding
- K1 and K2 well clustered
- Intersection Lineation defines K1 perpendicular to shortening

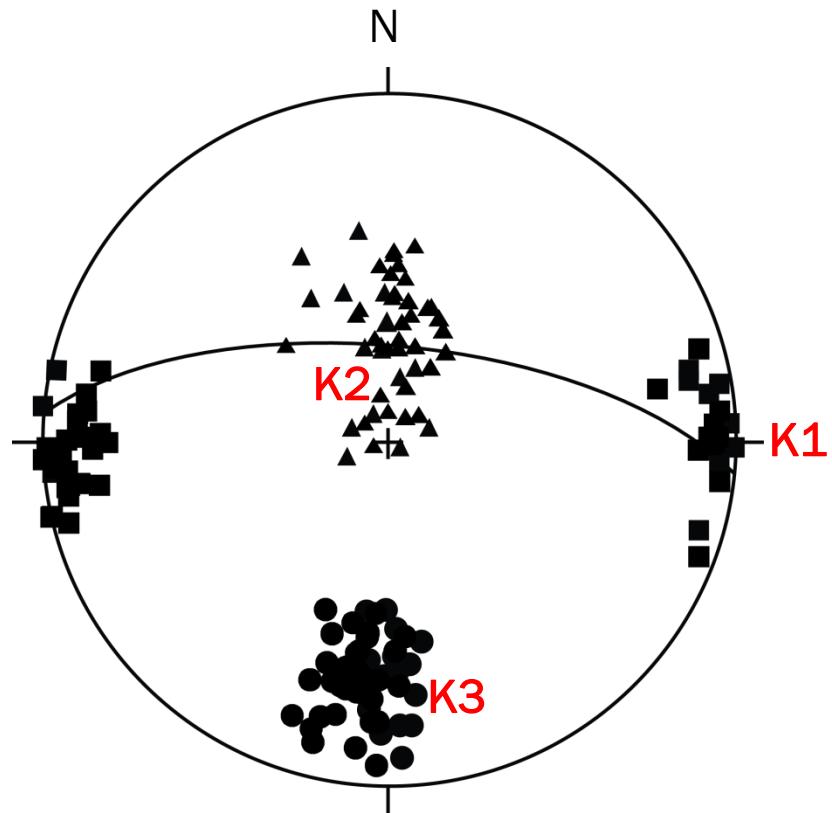

**Compaction Fabric with N-S Layer
Parallel Shortening**

Steep Limb

8 sites, 63 specimens

- K3 parallel to pole to bedding
- K1 and K2 well clustered
- Intersection Lineation defines K1 perpendicular to shortening

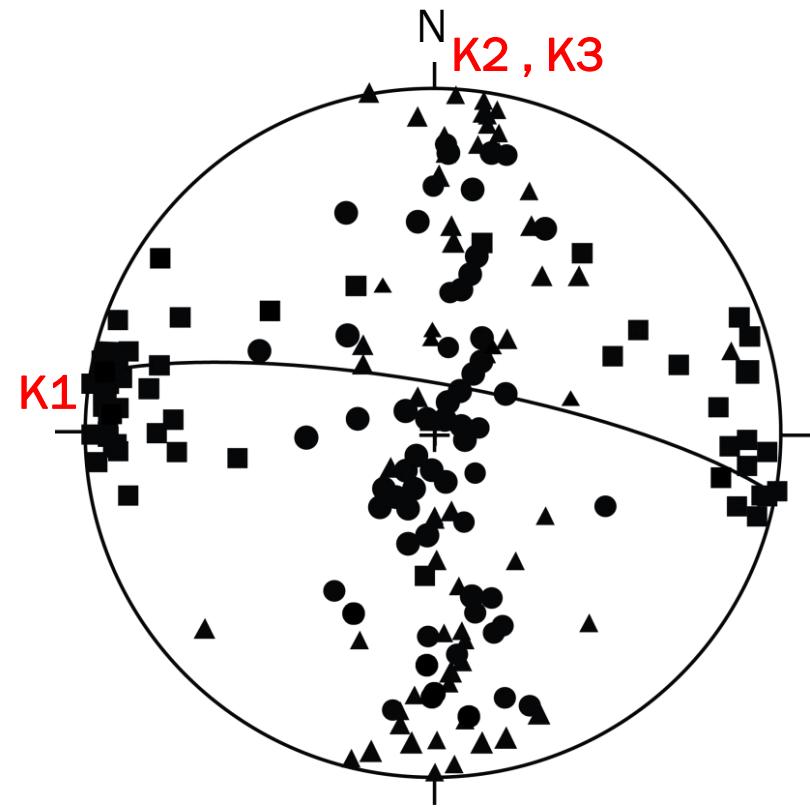

**Compaction Fabric with N-S Layer
Parallel Shortening**

Hinge Zone

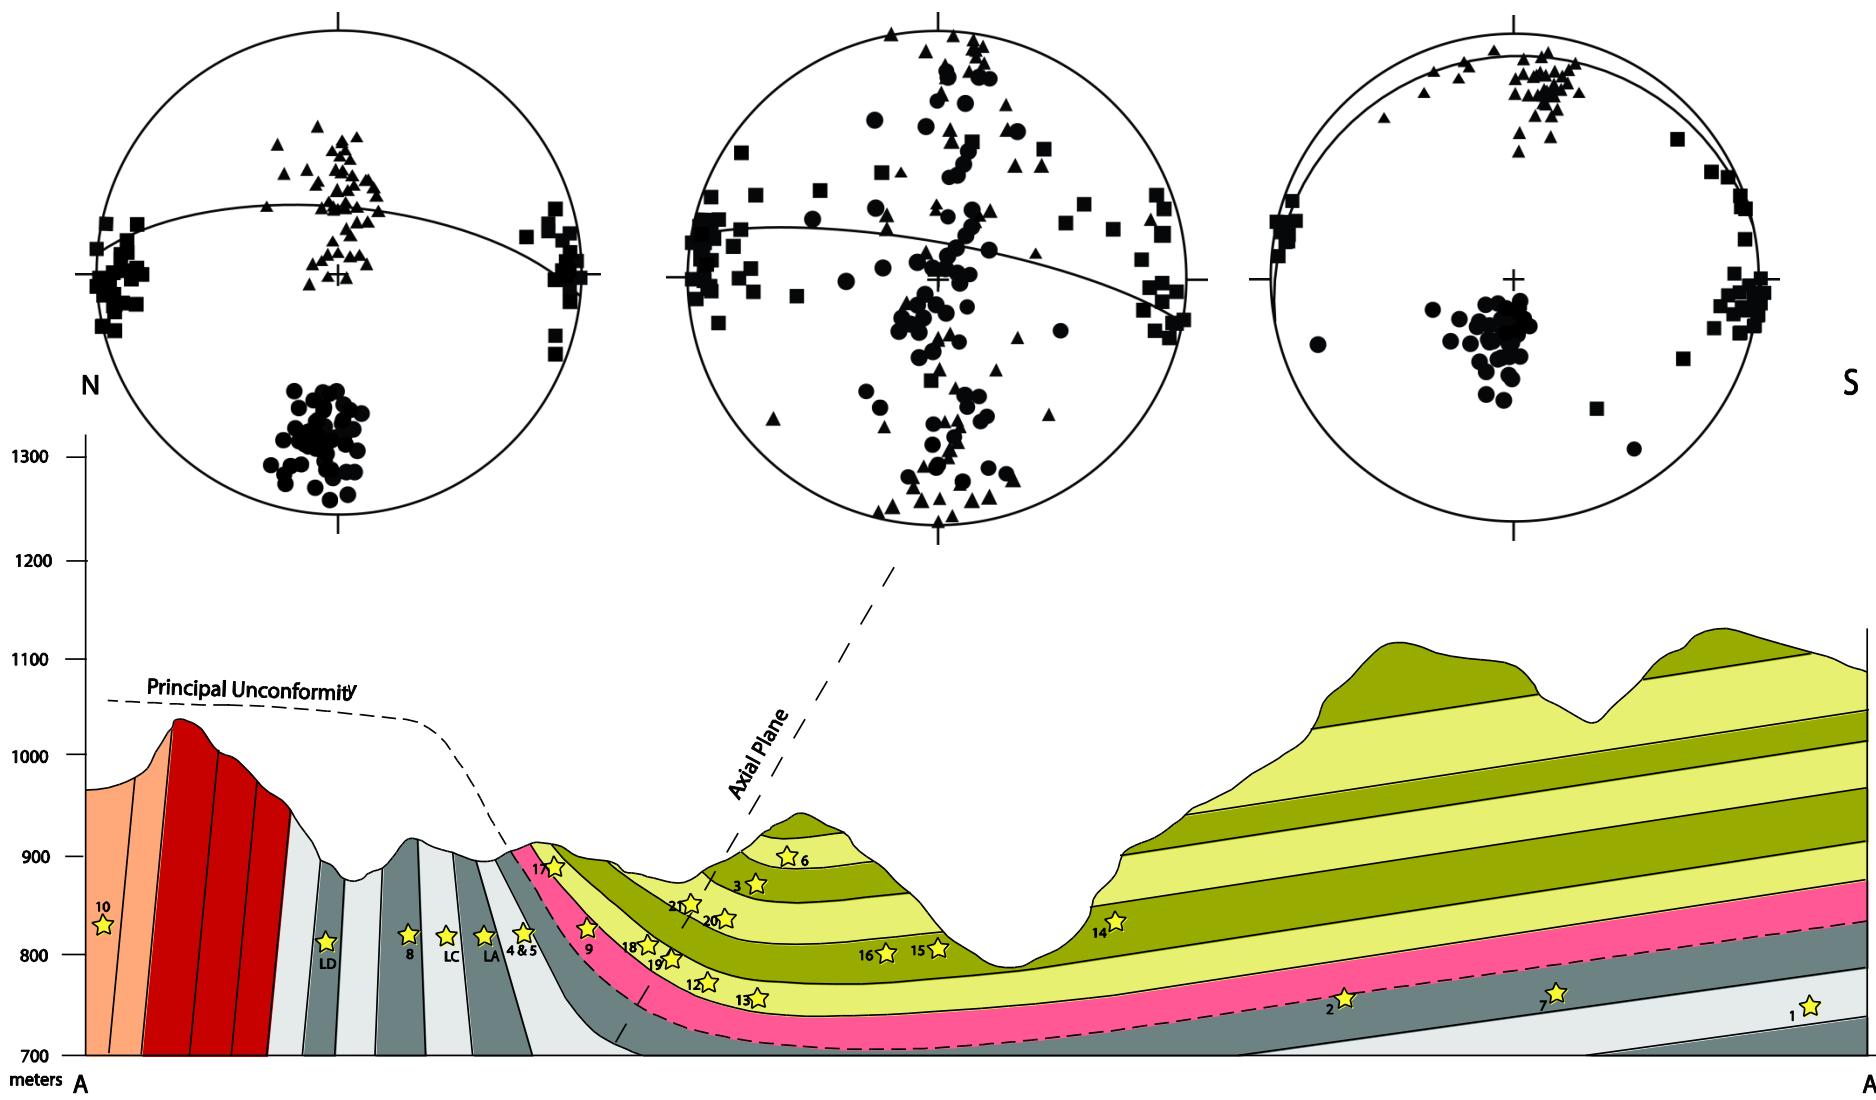

8 Sites, 61 specimens

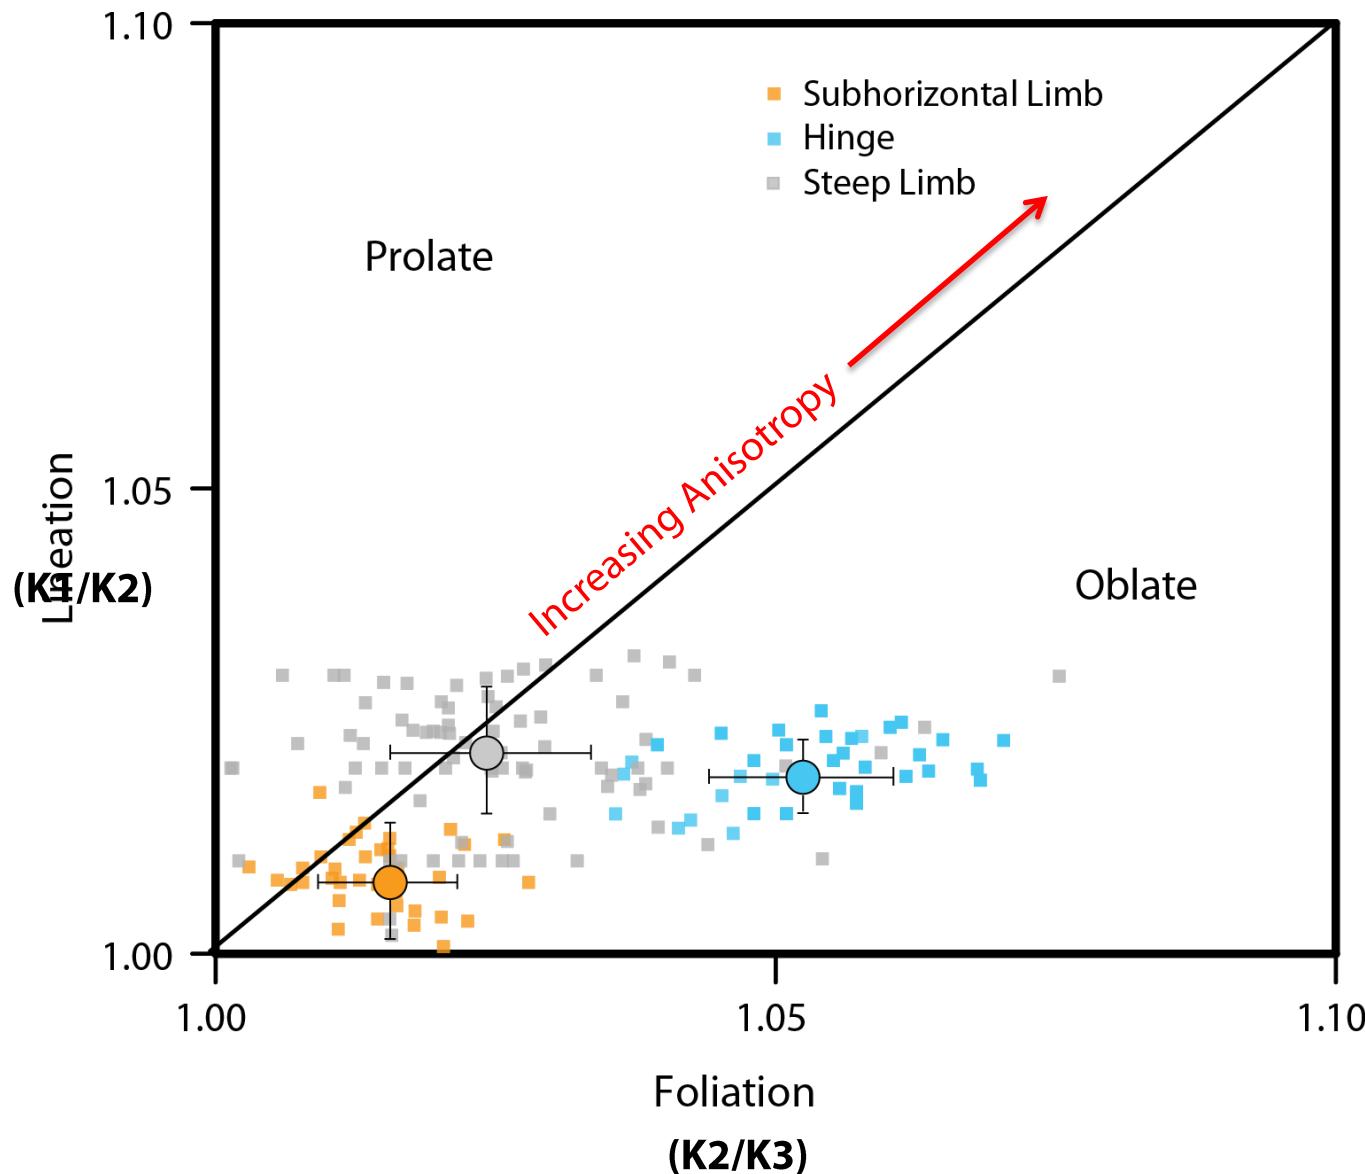

- K1 intersection lineation
- K2 and K3 in a N-S trending girdle

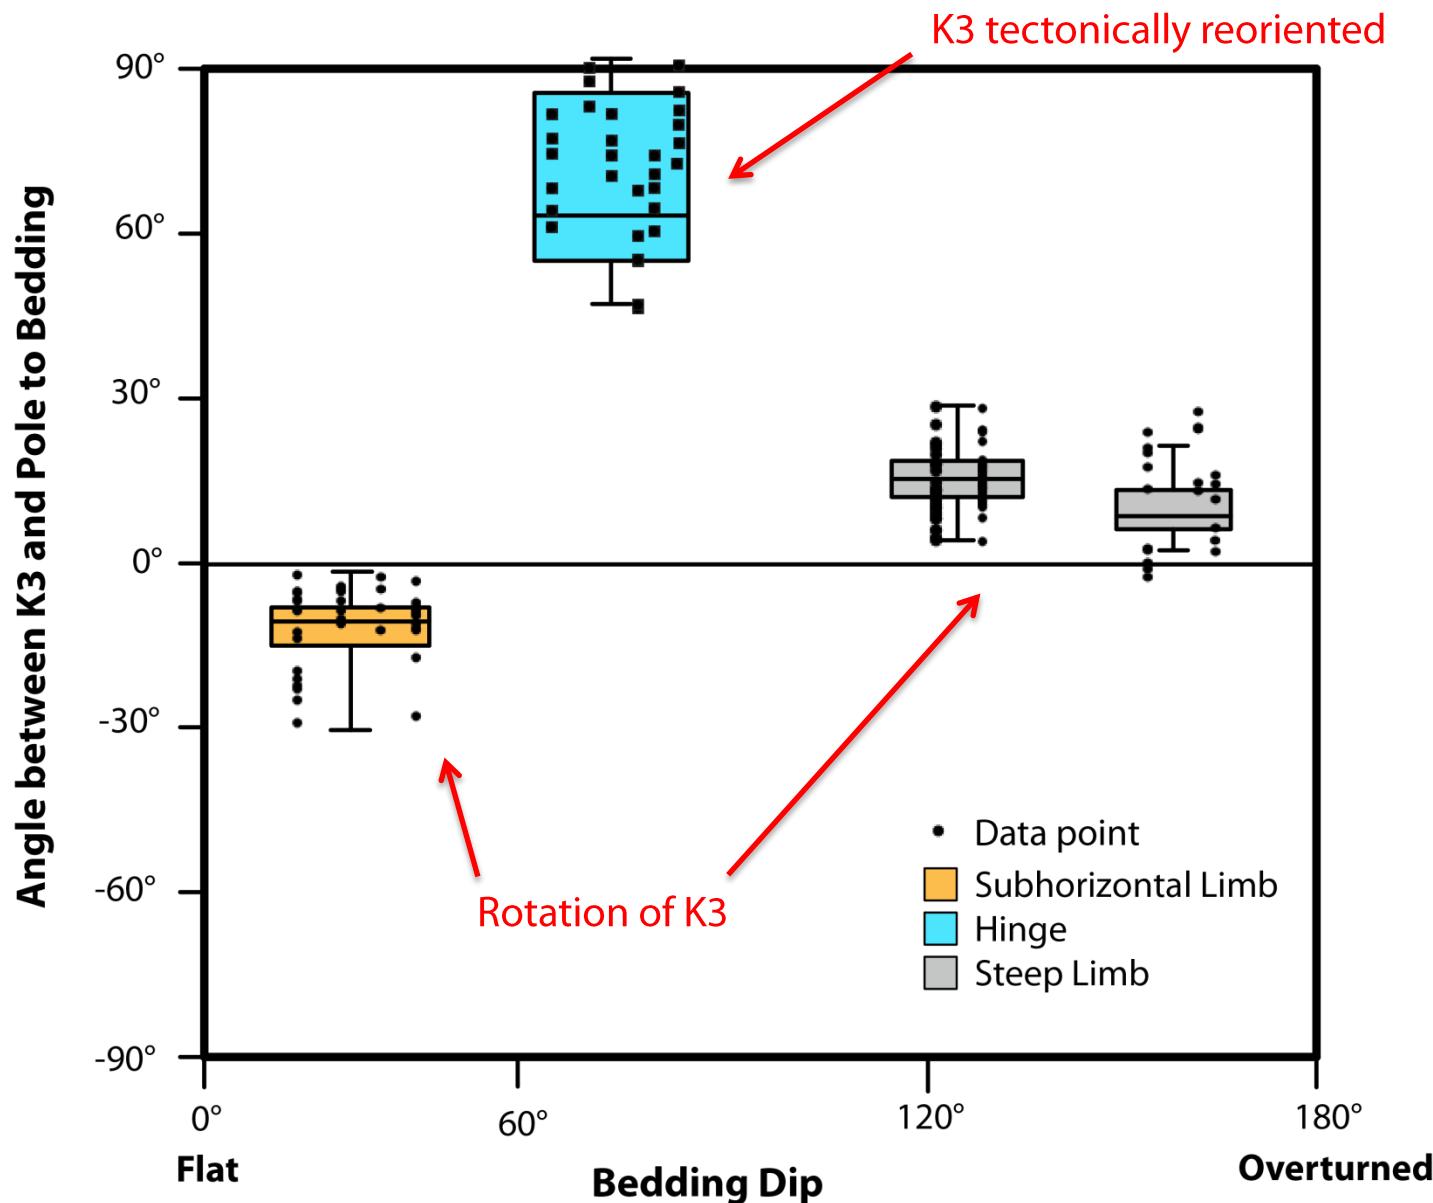

AMS Orientation Summary

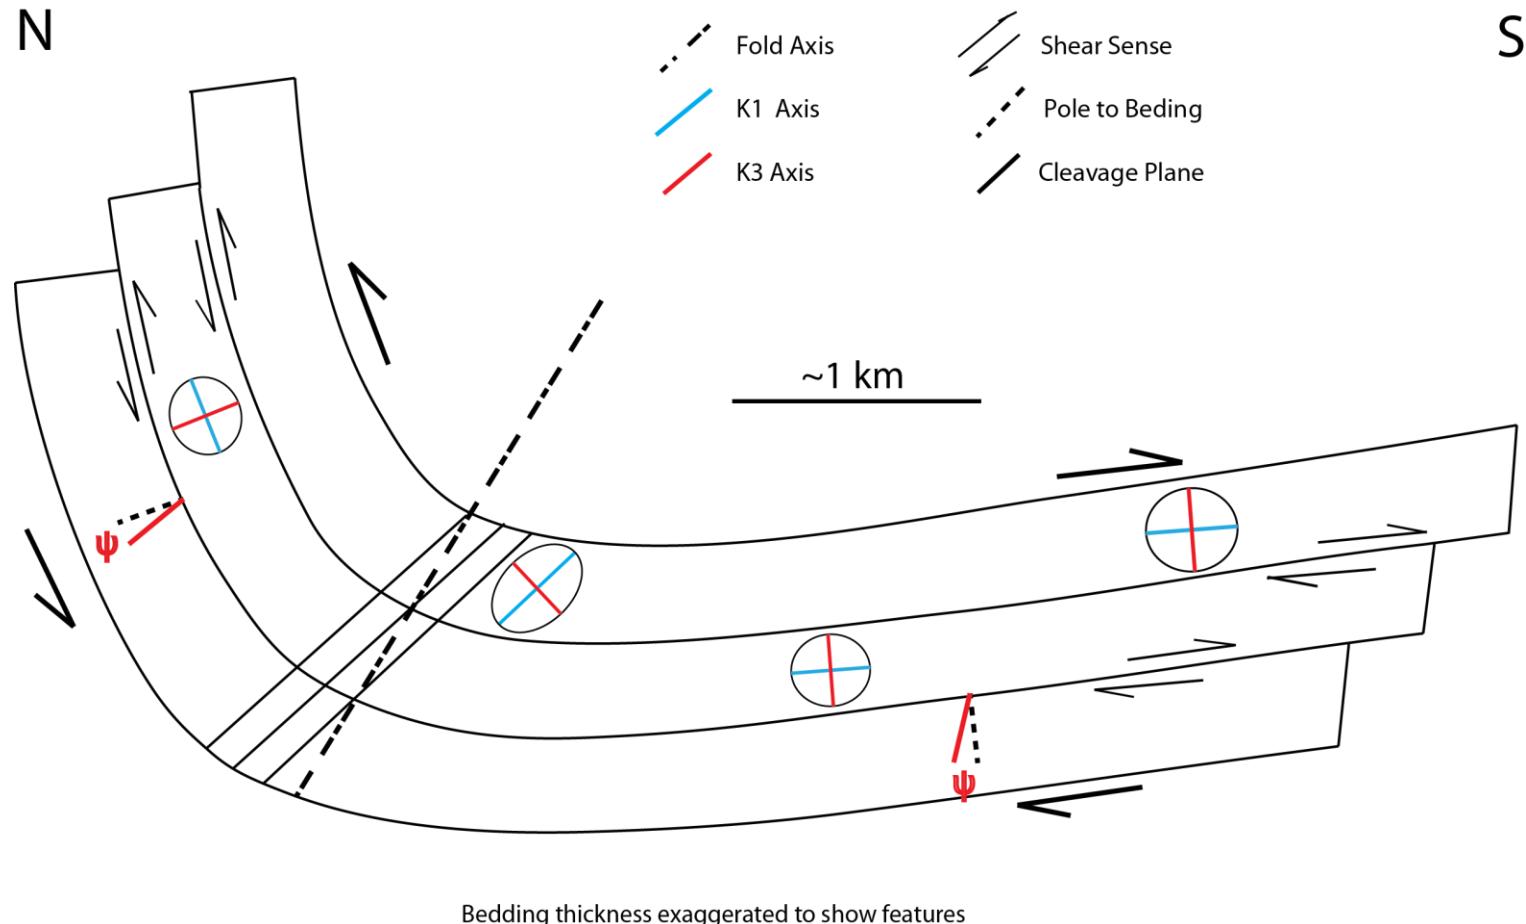

AMS Shape Anisotropy

Hinge vs. Limbs

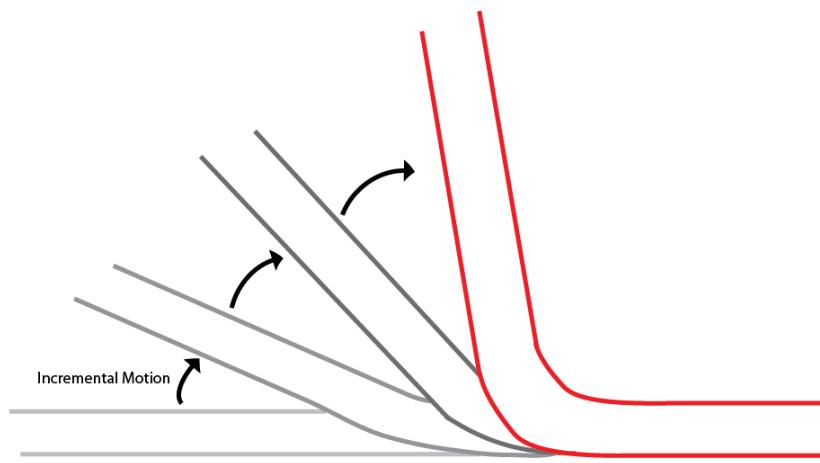

Review of AMS Fabrics

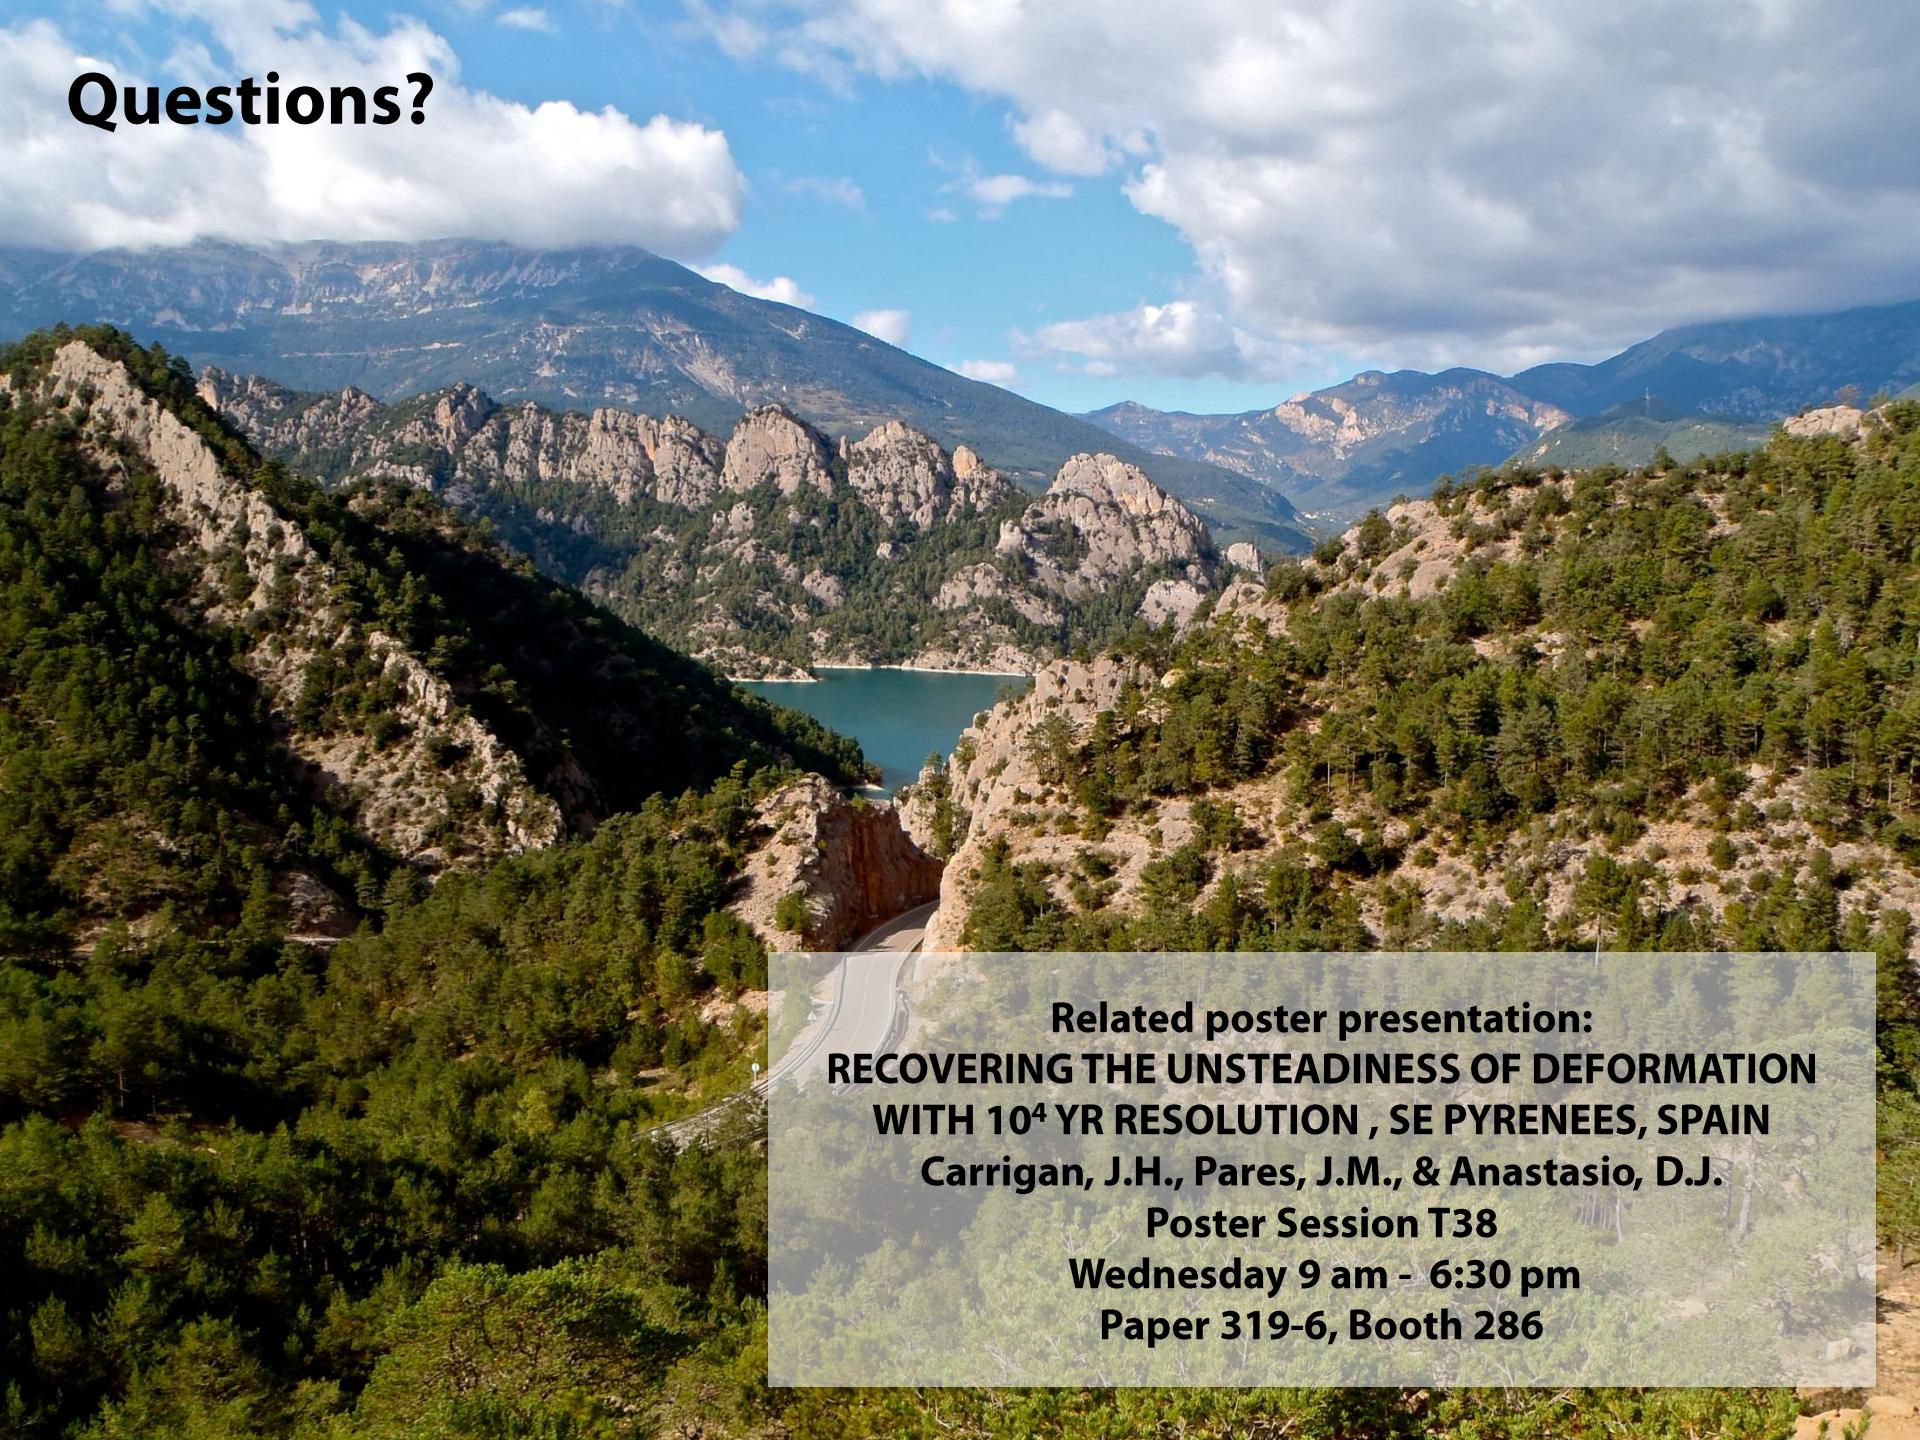

- **High strain, pervasive cleavage recorded in the hinge**
- **Sedimentary compaction and layer parallel shortening fabrics recorded in the limbs**
- **Flexural flow folding recorded by shear of K3 in the limbs**

Fixed Hinge Kinematics
