

# Let's Stop 'Solving' Water Management Problems

Kristan Cockerill  
Appalachian State University

## Solve <sup>(v)</sup>

to find a way to deal with *and end* (a problem)

to find the correct answer to (something, such as a riddle)

to find the correct explanation for (something, such as a mystery)

<http://www.merriam-webster.com/dictionary>

"It is ironic that many of today's water problems arise from the very solutions we administer."

Vorosmarty and Pahl-Wostl, 2013

"The chief cause of problems is solutions"

*Policy:*

*Water management is wicked....*

(...not that kind of wicked...)

wicked problems =

intractable

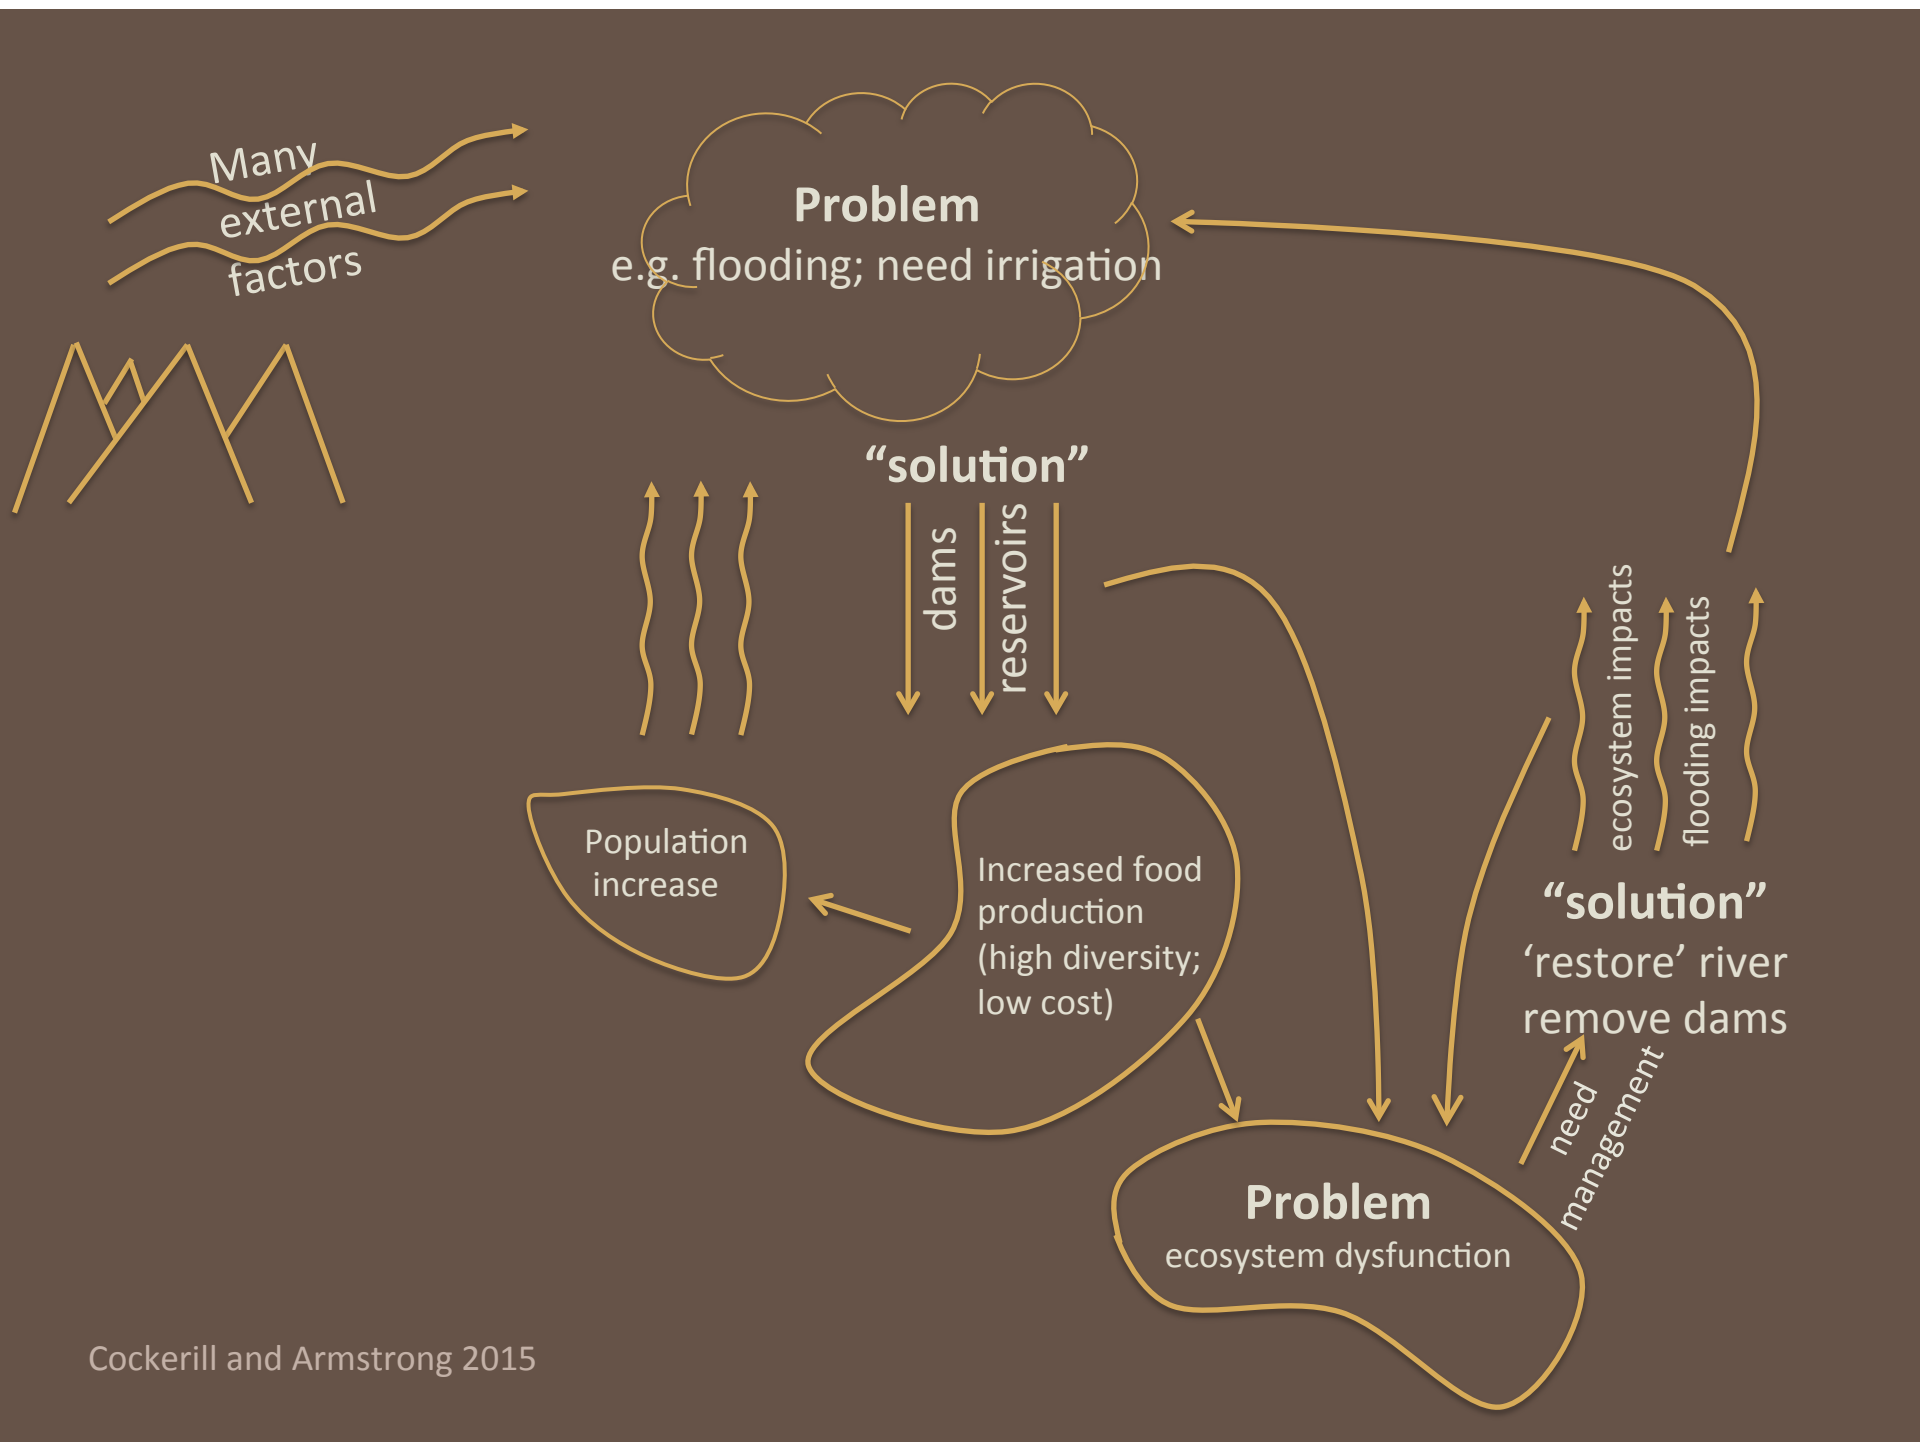

embedded in complex systems

multiple definitions

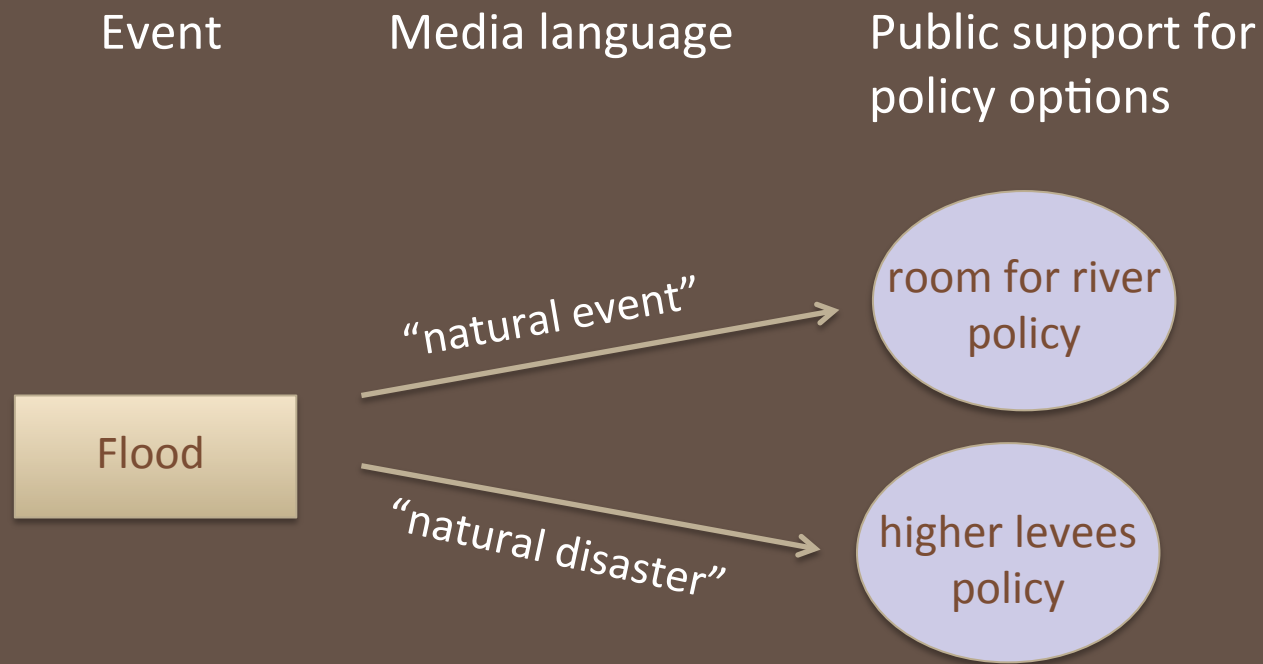

never fully solved...

“[a]t best they are only re-solved – over and over again”

Rittel and Webber 1973

# Attitudes / Perceptions: Language shapes perception:

# Problem – solution language = self-referential

Problem framing requires:

- define issue as problem
- establish blame
- offer solution

Problem without solution =

- risk
- apocalyptic
- incomplete
- incorrect

*Hard to avoid....*

Globescan / SustainAbility survey question:

“What are the technologies or changes in behavior which show the most promise for addressing water shortages over the next 10 years?”

News headline, Circle of Blue (2010):

*“Experts name the top 19 solutions to global freshwater crisis”*

“It is ironic that many of today’s water problems arise from the very solutions we administer.”

Vorosmarty and Pahl-Wostl (2013)

*““We need to move from problem identification to the co-design of evidence-based solutions””*

Pahl-Wostl quoted in Perez 2013

Science expected to solve

Embrace complexity

Accept continuous challenge

Avoid using 'solution' language

*Wicked problems need wicked good thinking,  
not simple 'solutions'*
