Geoscience Education in Digital Environments

Where's the Dead Sheep? Making Virtual Landscapes Real

Jacqueline Houghton¹, Clare Gordon¹, Annabeth Robinson², Ben Craven¹,
Dan Morgan¹ and Geoff Lloyd¹,

¹School of Earth and Environment, University of Leeds; ²Leeds Arts University

Virtual Landscapes Project

- Screen-based virtual reality environments, created using the Unity 3D game engine software.
- Aims:
 - Enhance the training students receive in geological field and map skills prior to going in the field.
 - Develop 3D visualisation skills.
 - Accessible alternative fieldtrips.
- Freely available on the internet
<http://www.see.leeds.ac.uk/virtual-landscapes/>
- Winner: Times Higher Education Award for Outstanding Digital Innovation in Teaching or Research, 2016.

Current Landscapes

Future Landscapes

Geological Mapping & Field Skills

- Designed as an in-class exercise with paper field slip and notebook.
- Map a virtual landscape populated with rock outcrops
- Replicate aspects of the mapping experience - ***not a fieldwork replacement!***

Geological Mapping & Field Skills

- Easier to focus on learning and teaching the skills in a classroom than in the field.
- Students make the same mistakes they make when learning in the field.
- 77% agreed or strongly agreed – “I feel better prepared for the field”
- 84% agreed or strongly agreed – “Overall, I found the virtual world training a useful experience.”
- “I’m enjoying this way more than is natural!”
- “Good alternative to normal teaching.”

Why a dead sheep?

Memorable and engaging experiences aid learning

What makes the virtual landscape an immersive experience ...

The Landscape

Three River Hills

Three River Hills

Anglesey

Anglesey

The Real Place

Virtual Anglesey

The Rocks

Scale and Speed

- Less important in imaginary landscapes. Very important for real ones.
- Affects sense of place and perception of speed.
- Speed set to “brisk walk” to replicate time management and decision making skills.
- Students want to go faster/fly/teleport/respawn.
- Answer: smaller landscapes, outcrops closer together and/or a “run” mode.

The Sound Track

- Sheep
- Birds
- Running water
- Footsteps
- RAF flying over
- Flies buzzing round dead sheep
- Waves
- Wind
- Seagulls
- Notebook opening
- Wind turbines

Assets

- Give a sense of scale.
- Give a sense of place.
- Provide reference points in the landscape.
- Perform a function (“travel” in minibus).
- Add history to a landscape.
- Form story seeds.
- Vital to the immersive experience.

Where is the dead sheep...?

Thank you

Just
resting
